

THE NACHURS ADVANTAGE ON POTATOES

- ▶ Maximizes available phosphorus and soluble potash required for top yields and improved plant health
- ▶ Better flavor and longer shelf life
- ▶ Earlier to market potential, and better shipping quality
- ▶ Tank mixes with insecticides and post-spray applications
- ▶ Safe on plant foliage
- ▶ Uniform coverage
- ▶ Clean, easy handling, non-corrosive solutions

GIVE YOUR POTATOES THE NACHURS ADVANTAGE

NACHURS

quality in every drop™

GO WITH THE LEADER NACHURS

- ▶ Highest quality liquid starter and foliar fertilizers
- ▶ Quality, precision placement, seed and foliar safe
- ▶ Low impurities
- ▶ Low salt
- ▶ True solution N-P-K
- ▶ Orthophosphate (available phosphorus)
- ▶ Highly soluble

NACHURS liquid starters and foliars have a neutral pH and are low in both salt index and impurities. These features of our liquid starters enable the product to be placed directly with the seed at planting time. Placement with the potato seed piece allows the available phosphorus to be taken up at the critical early stages of growth to maximize yield potential.

Applying available nutrients of NACHURS foliar fertilizer on the plant foliage allows for immediate absorption into the plant in a very short period of time. This immediate uptake promotes better plant health and increased yield potential.

NACHURS liquid starters and foliars contain 80% - 100% of their phosphates in the available orthophosphate form. Orthophosphate is immediately available to the plant during the critical early stages of growth. Plants can only take up phosphorus in the orthophosphate form.

GIVE YOUR POTATO CROP THE NACHURS ADVANTAGE

Potatoes have an extremely high requirement for phosphorus in the first 60 days of growth, along with a critical need for boron, magnesium and zinc. All these nutrients play a role in the production of new growth and the development of roots and energy for plant growth. Research has shown that phosphorus levels in the plant must start out high and be maintained in the petiole throughout the season until bulking.

The NACHURS Advantage gives your potato crop a highly available source of these nutrients in the early stages of growth. Placement on the seed piece ensures immediate availability and the low salt index ensures seed safety. Along with a well balanced total nutrition program, NACHURS liquid starters can maximize yield and quality while minimizing the effects of disease and insects.

Give your potato crop the benefit of seed placed NACHURS liquid starter.

- ▶ Maximizes available phosphorus and soluble potash required for top yields and improved plant health
- ▶ Better flavor and longer shelf life
- ▶ Earlier to market potential, and better shipping quality
- ▶ Tank mixes with insecticides and post-spray applications
- ▶ Safe on plant foliage
- ▶ Uniform coverage
- ▶ Clean, easy handling, non-corrosive solutions

Sales and Service

- ▶ Total solution to your starter & foliar fertilizer needs
- ▶ Most experienced sales team in the industry
- ▶ In business for over 60 years
- ▶ Commitment to service is unmatched
- ▶ Our expertise in the areas of agronomy and application equipment sets us apart in the liquid fertilizer market

Equipment Rebate Program

To use NACHURS liquid starter on the seed, your planter may need in-furrow equipment attachments. Contact your local NACHURS distributor to see if you qualify for our Equipment Rebate Program.
