

## THE NACHURS ADVANTAGE ON PULSE CROPS

- ▶ Maximizes available nutrients required for top yields
- ▶ Promotes quick, uniform emergence
- ▶ Seed safe at recommended rates - rhizobium safe
- ▶ Precision Placement
- ▶ Tank mix with fungicides or other post application sprays
- ▶ Optimizes plant health
- ▶ Non-corrosive on planter/drill equipment and tanks
- ▶ Clean, easy handling

## GIVE YOUR PULSE CROPS THE NACHURS ADVANTAGE

**NACHURS**

quality in every drop™

# GO WITH THE LEADER NACHURS

- ▶ Highest quality liquid starter and foliar fertilizers
- ▶ Quality, precision placement, seed and foliar safe
- ▶ Low impurities
- ▶ Low salt
- ▶ True solution N-P-K
- ▶ Orthophosphate (available phosphorus)
- ▶ Highly soluble

NACHURS liquid starters and foliar fertilizers have a neutral pH and are low in both salt index and impurities. These features of our liquid starters enable the product to be placed directly with the seed at planting time. Placement with the pulse seed allows the available phosphorus to be taken up at the critical early stages of growth to maximize yield potential.

Applying available nutrients of NACHURS foliar fertilizer on the plant foliage allows for immediate absorption into the plant in a very short period of time. This immediate uptake promotes better plant health and increased yield potential.

NACHURS liquid foliar fertilizers contain 80% - 100% of their phosphates in the available orthophosphate form. Plants absorb and metabolize phosphorus in the orthophosphate form making orthophosphate immediately available to the plant during critical growth stages.

# GIVE YOUR PULSE CROP THE NACHURS ADVANTAGE

Pulse crops have a critical need for phosphorus and potassium from germination through reproductive stages, where maximum yield potential is determined.

**The NACHURS Advantage** ensures that the pulse plant has adequate available nutrients when the plant needs it most for maximum yield potential.

Give your pulse plant a strong and uniform emergence with NACHURS seed-placed starter. When used as a foliar fertilizer, and applied to the plant foliage, the nutrients are absorbed quickly throughout the plant. This results in healthier pulse crops which maximize yield. NACHURS liquid fertilizers can also be tank-mixed with most post-spray applications to save pulse growers time and money!

For maximum yields and early season plant performance, give your pulse crops **The NACHURS Advantage**.

- ▶ Maximizes available nutrients required for top yields
- ▶ Promotes quick, uniform emergence
- ▶ Seed safe at recommended rates - rhizobium safe
- ▶ Precision Placement
- ▶ Tank mix with fungicides or other post application sprays
- ▶ Optimizes plant health

## Sales and Service

- ▶ Total solution to your starter fertilizer needs
- ▶ Most experienced sales team in the industry
- ▶ In business for over 60 years
- ▶ Commitment to service is unmatched
- ▶ Our expertise in the areas of agronomy and application equipment sets us apart in the liquid fertilizer market

## Equipment Rebate Program

To use NACHURS liquid starter on the seed, your planter may need in-furrow equipment attachments. Contact your local NACHURS distributor to see if you qualify for our Equipment Rebate Program.
