

THE NACHURS ADVANTAGE ON SUGAR BEETS

- ▶ Maximizes available phosphorus and potassium required for top yields
- ▶ Promotes quick, uniform emergence with better stands
- ▶ Seed safe at recommended rates
- ▶ Safe on plant foliage
- ▶ Tank mix with glyphosates and fungicides
- ▶ Optimizes plant health
- ▶ Non-corrosive on planter equipment and tanks
- ▶ Clean, easy handling

GIVE YOUR SUGAR BEET CROP

THE NACHURS

ADVANTAGE

NACHURS

quality in every drop™

GO WITH THE LEADER NACHURS

- ▶ Highest quality liquid starter fertilizers
- ▶ Quality, precision placement, seed safe
- ▶ Low impurities
- ▶ Low salt
- ▶ True solution N-P-K
- ▶ Orthophosphate (available phosphorus)
- ▶ Highly soluble

NACHURS liquid starters and foliars have a neutral pH and are low in both salt index and impurities. These features of our liquid starters enable the product to be placed directly with the seed at planting time. Placement with the sugar beet seed allows the available phosphorus to be taken up at the critical early stages of growth to maximize yield potential.

Applying available nutrients of NACHURS foliar fertilizer on the plant foliage allows for immediate absorption into the plant in a very short period of time. This immediate uptake promotes better plant health and increased yield potential.

NACHURS liquid starters and foliars contain 80% - 100% of their phosphates in the available orthophosphate form. Plants absorb and metabolize phosphorus in the orthophosphate form making orthophosphate immediately available to the plant during critical growth stages.

GIVE YOUR SUGAR BEET CROP THE NACHURS ADVANTAGE

The sugar beet has a critical need for phosphorus and potassium in establishing a uniform stand, strong root system and overall plant health early in the season in order for it to reach its full production potential.

The NACHURS Advantage ensures that the sugar beet plant has adequate available phosphorus and potassium when the plant needs it most.

Give your sugar beet plant a strong and uniform emergence with NACHURS seed-placed starter. When used as a foliar fertilizer, and applied to the plant foliage, the nutrients are absorbed by the plant rapidly and translocated throughout the plant for healthier sugar beets to maximize yields. NACHURS liquid fertilizers can also be tank-mixed with most glyphosates and fungicides to save growers time and money!

For maximum yields and early season plant performance, give your sugar beet crop **The NACHURS Advantage**.

- ▶ Maximizes available phosphorus and potassium required for top yields
- ▶ Promotes quick, uniform emergence with better stands
- ▶ Seed safe at recommended rates
- ▶ Safe on plant foliage
- ▶ Tank mix with glyphosates and fungicides

Sales and Service

- ▶ Total solution to your starter fertilizer needs
- ▶ Most experienced sales team in the industry
- ▶ In business for over 60 years
- ▶ Commitment to service is unmatched
- ▶ Our expertise in the areas of agronomy and application equipment sets us apart in the liquid fertilizer market

Equipment Rebate Program

To use NACHURS liquid starter on the seed, your planter may need in-furrow equipment attachments. Contact your local NACHURS distributor to see if you qualify for our Equipment Rebate Program.
