

# YaraVita<sup>®</sup> PROCOTE<sup>®</sup>

## Nachurs Recommended Material Handling Solutions

YaraVita Procite is an oil-based formulation that is heavy and thick. To optimize blending results, Nachurs and Micro Matic have developed recommended equipment options. The equipment that has been specified meets the material handling requirements of YaraVita Procite's physical properties.

### Closed Systems

#### The Future of Liquid Transfer

The entire process takes place within a Micro Matic closed system that has been the industry leader for over 20 years. No Dust. No Bag Breaking. No mess. No dripping. No exposure. Operate with just one person. Regulations are trending toward increased use of closed systems.

#### Up To \$3,000 Rebate For Equipment An Investment By Nachurs in Operational Success

After rebate, the profits earned on only a portion of one tote of YaraVita Procite will pay for the equipment that will provide years of material handling efficiency of YaraVita Procite.

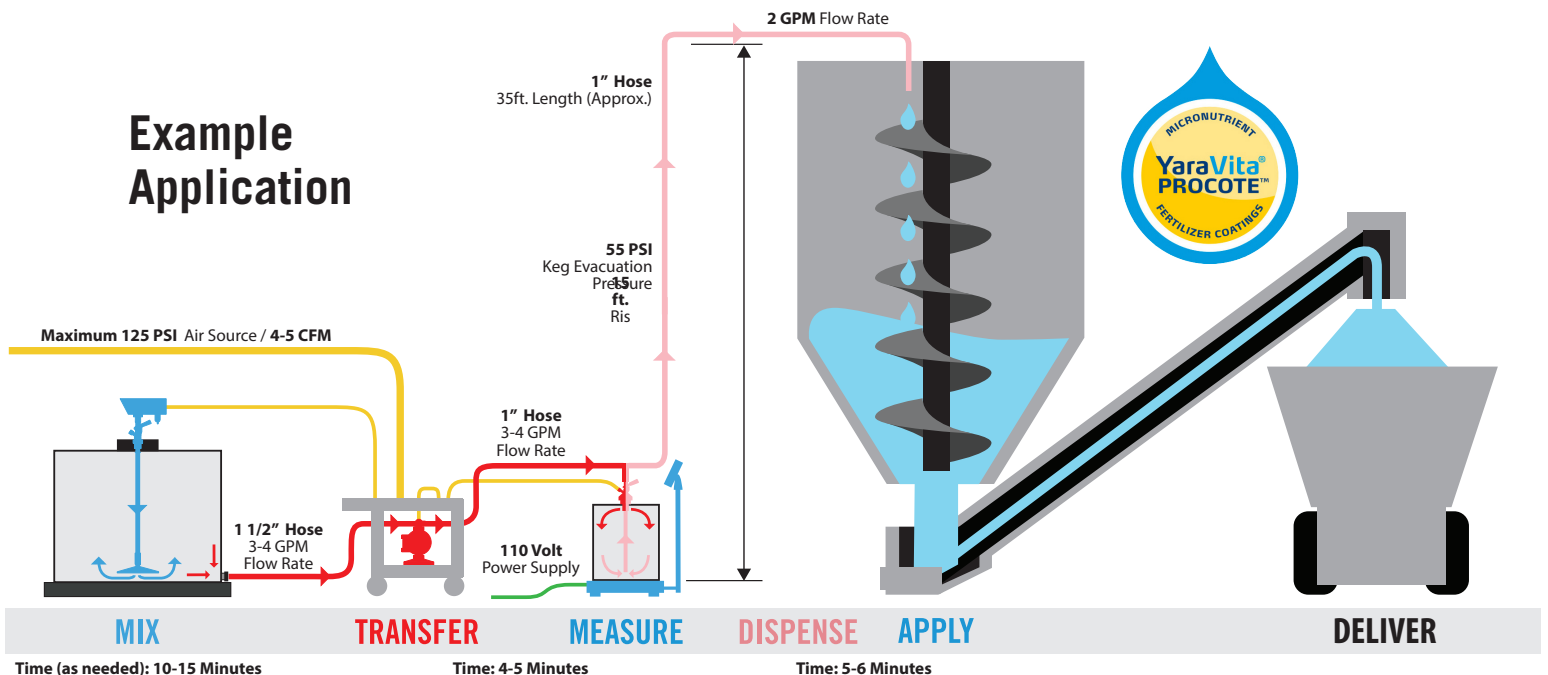

### Versatile Design

#### Useful for YaraVita Procite and Other Products

Valuable system components including the mixer and the scale can be used on other fertilizers, micronutrients, biologicals, and adjuvants. The entire system is quickly cleaned and ready for its next use via blow down. The YaraVita Procite Mixer can be also used on suspension concentrates, seed treatments and emulsions. To prevent cross-contamination, Nachurs does not recommend using the entire system interchangeably between other fertilizer or pesticide products.

### Micro Matic Support

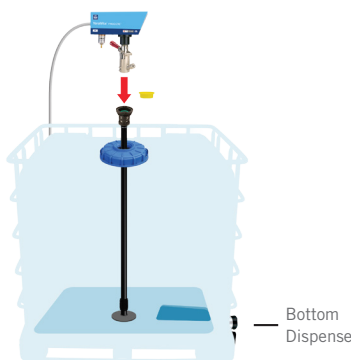

All system components are protected by a 1 year warranty. Micro Matic employees are available to assist with questions, inquiries, designs and specialized system adaptations.

# SYSTEM SOLUTIONS

## Options for How to Operate with YaraVita® PROCOTE®

YaraVita Procote is an oil-based formulation. Over time, settling of the contents inside the tote will occur. Before applying YaraVita Procote to the fertilizer, it should be mixed with a Micro Matic Pro-Blend® Mixer for 15-20 minutes to bring it into a completely homogeneous blend. For the mixing process, each tote will need to be equipped with a tote mixing apparatus as shown below.

### FOR MIXING ONLY

Used by the Distributor who wants to mix YaraVita Procote and then use their own process and equipment to Transfer, Measure, Mix and Apply the product.

**Tote Mixing Assembly - Part #11331**

**Tote Mixer - Part #7339-YARA**

**Price: \$1,837**

### COMPLETE MANUAL SYSTEM

Used by the Distributor who wants a total material handling solution that will Mix, Transfer, Measure, Dispense and Apply YaraVita Procote. The operator is responsible to manually operate the system during processing. Includes all equipment shown except the container of YaraVita Procote. The Distributor is responsible to provide the hose line from the keg to the blenders and the applicator, if used.

**Part #11125**

**Price: \$5,485**

### COMPLETE AUTOMATED SYSTEM

Used by the Distributor who wants a total material handling solution that will Mix, Transfer, Measure, Dispense and Apply YaraVita Procote. Starting with a mixed product, the operator programs the batch amount and starts the process. The Automatic System dispenses the programmed amount into the pressure keg. Then the batch is sent to the blender after selecting the dispense switch. Includes all equipment shown. The Distributor is responsible to provide the hose line from the keg to the blenders and the applicator, if used.

**Part #11126**

**Price: \$8,990**

**MICRO MATIC**
